

IN THE CLAIMS

Please cancel Claims 5 to 13 without prejudice to or disclaimer of the subject matter presented therein.

1. (Original) A lithium secondary battery with a negative electrode comprising a negative electrode active material layer comprising alloy particles comprising silicon and tin and having an average particle diameter of 0.05 to 2 μm as an active material, and a current collector, wherein the negative electrode active material layer has a storage capacity of 1,000 to 2,200 mAh/g and a density of 0.9 to 1.5 g/cm³.

2. (Original) The lithium secondary battery according to Claim 1, wherein the negative electrode active material layer has a thickness of 10 to 50 μm .

3. (Original) The lithium secondary battery according to Claim 1, wherein the negative electrode active material layer comprises an active material, a binder and a conductive auxiliary material.

4. (Original) The lithium secondary battery according to Claim 3, wherein at least polyvinyl alcohol is used as the binder of the negative electrode active material layer.

5 to 13. (Cancelled)
